Benefits of laser hair removal

Laser hair removal is scientifically proven to be associated with a number of benefits, especially when you compare this technique to other hair removal methods. It's quick, virtually pain-free, less painful than waxing, prevents in-grown hairs and is a long-term solution.

1. Long-lasting results: Significant reduction in hair growth.
2. Precision and effectiveness: Targets specific hair follicles without damaging the surrounding skin, suitable for various skin types and hair colours.
3. Time-saving and convenient: Reduces the need for constant shaving or waxing.
4. Reduced ingrown hairs: Minimises the occurrence of painful bumps and irritation.
5. Improved skin texture: Enhances overall skin appearance by minimising pores and reducing scars or blemishes.

PLEASE NOTE

- We can also tailor packages to your individual needs.
- We use the latest technology in laser hair removal. The laser machine works on 3 wavelengths and can be used on all skin types.
- The Cryo Sheer Diode laser machine has a cooling ice tip to cool the skin as the laser attacks the hair follicle.
- We recommend 8-12 sessions.
- The area needs to be shaved the day before your treatment.
- You also need to stop any waxing, epilation, plucking and hair removal creams 4 weeks prior to your treatment and in between treatments.
- Shaving is promoted during this time.
